Drug Dosage Calculation Formulas. To calculate the number of tablets, use the following formula: Strength required / Stock strength = Number of tablet(s) required. Or another way this drug dosage formula can be expressed is: What you want / What you've got = Number of tablet(s) required. To calculate the volume dose for liquid medicine, use this formula: (Strength required / Stock strength) x Stock volume = Volume dose required

Dosage calculation formulas. If you want to calculate the dose of a medication, you need to use the following equation: dose = weight \* dosage. Weight is the patients weight, expressed in kg or lb. It is very important that you input an accurate result; Dosage is the prescribed amount of drug in mg per kg of body weight. You can usually find this number on the medicament box or on the prescription.
