## **Treating Colon Cancer In The Elderly - Caring People**

Colorectal cancer is a disease of the elderly, with 70% of patients being aged 65 years or older. In Western countries, the total number of elderly patients with this disease is expected to further increase in the future. Since the incidence of adverse physical or socioeconomic conditions in the elderly is higher than in younger patients, a thorough assessment of the patient's suitability for therapy should be performed

colorectal cancer in the Czech Republic is an actual and demographically significant health issue. Half of all of the patients is older than 70 years.

## **[Colorectal cancer in the elderly]**

Advanced bowel (colorectal) cancer means cancer that has spread outside your bowel to other parts of your body. Treatment includes chemotherapy, surgery, targeted cancer drugs (biological therapies) and radiotherapy.

## **Bowel cancer | Cancer Research UK**

Surgery for colon cancer If colon cancer is at a very early stage, it may be possible to remove just a small piece of the lining of the colon wall, known as local excision. If the cancer spreads into muscles surrounding the colon, it's usually necessary to remove an entire section of your colon, known as a colectomy.

## **Bowel cancer - Treatment - NHS**

The exact cause of bowel cancer is not known, but there are a number of things that can increase your risk, including: age – almost 9 in 10 people with bowel cancer are aged 60 or over; diet – a diet high in red or processed meats and low in fibre can increase your risk; weight – bowel cancer is more common in overweight or obese people

Cancers affecting elderly men In men, prostate cancer is the one that is most commonly found. It accounts for a quarter of cancer cases. As in women, it is followed by lung cancer, which affects 16% of elderly men and colorectal cancer which strikes 14%. Altogether, these cancers affect half of all men diagnosed with the disease. Breast Cancer

## **What Are The Most Common Cancers In The Elderly? | hometouch**

Several decades ago, colorectal cancer was infrequently diagnosed. Nowadays, it is the world's fourth most deadly cancer with almost 900 000 deaths annually. Besides an ageing population and dietary habits of high-income countries, unfavourable risk factors such as obesity, lack of physical exercise, and smoking increase the risk of colorectal cancer.

## **Colorectal cancer - The Lancet**

Colorectal cancer is the second leading cause of cancer death, and at least 40 percent of diagnoses occur in people over 75. "Because

# Get Free Colorectal Cancer In The Elderly

older people who have never been screened are at higher risk for the disease than their counterparts who have been tested, the balance between the benefits and harms of screening is in favor of screening," says MSK biostatistician Ann Zauber .

## **Should the Elderly Consider Colon Cancer Screening ...**

Colorectal cancer (CRC) is one of the leading causes of cancer-related deaths worldwide. As society ages, the number of elderly patients with CRC will increase. The percentage of patients with right-sided colon cancer and the incidence of microsatellite instability are higher in elderly than in younger patients with CRC.

As the population ages, clinicians are facing an increasing number of elderly patients with colorectal cancer. These patients pose unique challenges as they have more comorbidities and lower functional reserves. In addition, the treatment goals may differ from those in younger patients. This book discusses in depth the different aspects of management of colorectal cancer in the elderly. After the provision of pertinent background information on the normal physiology of aging, screening and diagnosis are discussed. Subsequent chapters focus on a range of issues associated with the surgical and
