Attachment to parents and primary caregivers is normal. Around eight or nine months, separation anxiety surfaces, and babies object to being away from parents or caregivers. By four months of age, vision improves, and infants pay attention to bright objects, preferring primary colours, particularly red.

The Attachment and Biobehavioral Catch-up (ABC) intervention was developed by Dr. Mary Dozier to help caregivers nurture and respond sensitively to their infants and toddlers to foster their development and form strong and healthy relationships.

~~ABC Intervention | Developmental Psychology Lab~~

Introduction. What is attachment? Children are considered to be attached if they tend to seek proximity to and contact with a specific caregiver in times of distress, illness and tiredness. 1 Attachment to a protective caregiver helps infants to regulate their negative emotions in times of stress and distress and to explore the environment, even if it contains somewhat frightening stimuli.

~~Attachment: Impact on children's development...~~

The Program for Infant/Toddler Care (PITC) equates good care with trained infant/toddler care teachers who prepare themselves and the environment so infants can learn. PITC trains infant/toddler leaders and educators to get "in tune" with each infant or toddler they serve and learn from the individual child what he or she needs, thinks, and feels.

~~Program for Infant Toddler Care | PITC~~

Provider Designation Children and Family Treatment and Support Services/Home and Community Based Services Purpose of Provider Designation. Beginning July 1, 2018, providers must be designated through this process to provide newly aligned Children ´ s SPA/HCBS services under the NYS Medicaid program (both fee–for–service Medicaid and Medicaid Managed Care):
