Whereas the original Sequel
featured first-order crossover
slopes, with the out-of-band
rejection steepening to
12dB/octave, well away from the
actual crossover frequency, the
II's crossover is a symmetrical,
second-order, 12dB/octave type. It
is mounted on a printed circuit
board carried on a metal tray that
sits on top of the woofer
enclosure.

I've had Logan Quests and the Aeries back in the mid 90's, which is around when the Sequel came out. The production run for Sequel II's was from 1995 to 99 I think. Beautiful speaker, very involving, also great for HT as long as you recognize some limitations in the deep bass and also a little in dynamics.
