Mastering Networks An Internet Lab Manual [EBOOK] Mastering, a form of audio post production, is the process of preparing and transferring recorded audio from a source containing the final mix to a data storage device (the master), the source from which all copies will be produced (via methods such as pressing, duplication or replication).In recent years digital masters have become usual, although analog masters—such as audio tapes—are ...

Mastering (audio) - Wikipedia Bad Networks. An Internet network can be modeled using a directed graph G = (V, E): The set of nodes V consists of one node for every server in the network and there is an edge (u,v) ∈ E if and only if there is a direct link from server u to server v.Any server within a strongly connected component can send and receive packets to and from any server within the same strongly connected component.
