The capability of a mobility model to detect certain patterns of user behavior (e.g., favorite walks or walking habits) enables solutions for a number of challenging networking problems, including efficient opportunistic communications and handoff/cellular planning. We argue that the limited viewpoint of a single mobile node and its scarce resources (e.g., energy, memory or processing) are ...

IFIP WWIC is a single-track conference which has reached, over the last 15 years, a high quality level, which is reflected by the paper acceptance rate as well as the level of attendance. Following the conference tradition, there will be a best paper award. Selected presentations will be broadcasted live on the Internet.

In the era of the Unmanned Aerial Vehicles (UAVs) several kinds of applications were born to make use of these autonomous vehicles, from surveillance to emergency management, from entertainment to package delivery. All these systems are based on the autonomous capability of the unmanned vehicles. The common factor of such systems is the use of an ad-hoc wireless network that enables the ...
