Historically the medical profession has waged many much-heralded "wars," such as the war against polio, the war against cancer and the latest wars on heart disease, obesity, and tobacco. But without question the longest war fought by the American Medical Association has been against chiropractors. The America Medical Association was once dubbed "the most terrifying trade association on earth," a truth the chiropractic profession experienced when 12,000 chiropractors were arrested in the first half of the twentieth century simply for helping patients with only their hands. A pivotal point in this war, an antitrust case, *Wilk v. the AMA*, occurred when court testimony revealed the AMA's Final Solution for the "chiropractic menace" to be the "complete elimination of the chiropractic profession." They called chiropractors "rabid dogs," "killers," an "unscientific cult," and "a danger to public safety." When taken to task in court, the AMA could not provide one witness to prove these accusations; it was purely propaganda. They lost the case, but the war has continued unabated. This ruthless war against chiropractors revealed a dark chapter in American medicine that few people have seen, but chiropractors know well. Ironically, research now confirms there is more proof for chiropractic care than back surgery, which has been "accused of leaving more tragic human wreckage in its wake than any other operation in history." After a century assailing chiropractic as quackery, the table has finally turned with the medical profession now on the defensive, a fact the public has yet to hear but is well documented in this book with the latest scientific findings. The purpose of this book is to discuss this dark chapter in medical history - the events, tactics, and characters involved in political medicine's war against the chiropractic profession from persecution to vindication. This is the untold story of the medical war against chiropractic from persecution to vindication that could only be told by a chiropractic advocate.

The American Medical Association was once dubbed the most terrifying trade association on earth, a truth the chiropractic profession experienced when 12,000 chiropractors were arrested in the first half of the twentieth century simply for helping patients with only their hands

To Kill a Chiropractor The Media War Against Chiropractors Mark Twain warned -never pick a fight with people who buy ink by the barrel, -undeniably describing the century-long battle the chiropractic profession has fought against the AMA to -contain and eliminate- chiropractic by ruining its reputation with -chirophobia- - the poisonous and unwarranted defamation against chiropractors. Dr. JC Smith makes the case this medical-media war is fueled by Big Pharma spending billions annually on incessant direct-to-consumer advertisements to influence both the public and medical news reporters. Unquestionably, neither Big Pharma nor most MDs want any mention of nondrug solutions, especially chiropractic care for back pain. Chapters describing yellow journalism at major networks include -Banned at CNN- highlighting Sanjay Gupta, MD, who consistently avoids mentioning chiropractic care as an alternative to opioids or back surgery. -All Things Not Considered- at NPR reveals the virtual absence of chiropractic care due to NPR's largest sponsor - the Robert Wood Johnson Foundation, a subsidiary of Johnson & Johnson, maker of OxyContin. To Kill a Chiropractor is a thought-provoking and entertaining analysis of the back pain epidemic, the leading cause of disability in the nation. Incorporating 700 references and expert scientific opinions, Dr. Smith cleverly utilizes childhood stories, such as the Chicken Little fable to characterize the hysterical media attacks on chiropractors; Dr. Toad taking patients on his -wild ride- to drugs, shots and spine surgery; and Dr. Frankenstein promiscuously prescribing opioid painkillers like Halloween candy creating the current Pharmageddon with millions of new monsters dubbed the Walking Drugged, perhaps including you or someone you may know. Please visit the website @ Chiropractors for Fair Journalism.com.

This book explores the issues and problems relating to chiropractic medicine, particularly in light of the current health care reform occurring in the United States.

Explains how the American Medical Association conspired to discredit chiropractors and monopolize medicine and discusses how the author took on the AMA in a precedent-setting case that went all the way to the Supreme Court. Original. Tour. IP.

For half a century, the American Medical Association waged war against chiropractic, an intervention that relies on spinal adjustments to treat health problems. Chiropractors were regarded as the modern-day equivalent of snake-oil salesmen. Today, chiropractors are the third largest group of health care providers, after physicians and dentists, who treat patients directly. AMA policy now states that it is ethical for physicians not only to associate professionally with chiropractors but also to refer patients to them for diagnostic or therapeutic services. "In the last decade of the 20th century, chiropractic has begun to shed its status as a marginal or deviant approach to care and is becoming more mainstream," said Paul Shekelle, M.D. and director of RAND's Southern California Evidence-Based Practice Center. He played a key role in RAND's land-mark investigations of chiropractic that stimulated a national reappraisal of this and other nontraditional health care approaches.

A look at the emotional side of medicine—the shame, fear, anger, anxiety, empathy, and even love that affect patient care Physicians are assumed to be objective, rational beings, easily able to detach as they guide patients and families through some of life's most challenging moments. But doctors' emotional responses to the life-and-death dramas of everyday practice have a profound impact on medical care. And while much has been written about the minds and methods of the medical professionals who save our lives, precious little has been said about their emotions. In *What Doctors Feel*, Dr. Danielle Ofri has taken on the task of dissecting the hidden emotional responses of doctors, and how these directly influence patients. How do the stresses of medical life—from paperwork to grueling hours to lawsuits to facing death—affect the medical care that doctors can offer their patients? Digging deep into the lives of doctors, Ofri examines the daunting range of emotions—shame, anger, empathy, frustration, hope, pride, occasionally despair, and sometimes even love—that permeate the contemporary doctor-patient connection. Drawing on scientific studies, including some surprising research, Dr. Danielle Ofri offers up an unflinching look at the impact of emotions on health care. With her renowned eye for dramatic detail, Dr. Ofri takes us into the swirling heart of patient care, telling stories of caregivers caught up and occasionally torn down by the whirlwind life of doctoring. She admits to the humiliation of an error that nearly killed one of her patients and her forever fear of making another. She mourns when a beloved patient is denied a heart transplant. She tells the riveting stories of an intern traumatized when she is forced to let a newborn die in her arms, and of a doctor whose daily glass of wine to handle the frustrations of the ER escalates into a destructive addiction. But doctors don't only feel fear, grief, and frustration. Ofri also reveals that doctors tell bad jokes about "toxic sock syndrome," cope through gallows humor, find hope in impossible situations, and surrender to ecstatic happiness when they triumph over illness. The stories here reveal the undeniable truth that emotions have a distinct effect on how doctors care for their patients. For both clinicians and patients, understanding what doctors feel can make all the difference in giving and getting the best medical care.
