Trigger point therapy involves gently working directly on specific problem trigger points to release the muscle and other affected tissues and to interrupt the symptom patterns. We have found trigger point therapy to be particularly effective when used together with myofascial release to work on the surrounding fascia and soft connective tissues.

It is encouraging that myofascial trigger points are becoming more commonly considered when physicians diagnose their patients. Some primary care physicians, regularly administer trigger point injections. Some recognize the presence of trigger points and refer to Myofascial Trigger Point Therapists. Those that do, enjoy

*NAMTPT* *Myofascial Trigger Point Therapy* *What is it?*

Trigger point therapy is mostly rubbing and pressing on trigger points, which can feel amazingly relieving. Dry needling is a popular (but dubious) method of stabbing trigger points into submission with acupuncture needles. TrP treatment is not rocket science 1 — it's much too experimental to be so exact!

Myofascial trigger points, also known as trigger points, are described as hyperirritable spots in the skeletal muscle. They are associated with palpable nodules in taut bands of muscle fibers. They are a topic of ongoing controversy, as there is limited data to inform a scientific understanding of the phenomenon. Accordingly, a formal acceptance of myofascial "knots" as an identifiable source of pain is more common among bodyworkers, physical therapists, chiropractors, and osteopathic practitioners.
